

Summer Week 4

6/21 – 6/25

What We did?

- ❖ Started our Garden
- ❖ Worked on Composting
- ❖ Started working with the 3D printer and TinkerCad

Fun activities we will be doing:

- ❖ Learning about PH

School Age Weekly Recap

“A weed is but an unloved flower.”

— Ella Wheeler Wilcox

This week the class learned about lasagna gardening and even started their own. The concept is to put layers of compost directly on the garden. Let's see what pops in a couple weeks!

Let's talk 3D Printing!

- Students started learning TinkerCad
- Students practiced with shapes, letters, and symbols
- Students started having their first designs printed by Mr. Aaron
- Students will use this basic knowledge later in prosthetics

Let's talk Composting!

- Students learned what it means to compost
- Students explored different ways to compost
- Students learned Lasagna Gardening and what it means to layer your compost directly on the garden
- Students used materials to stop desertification and grown their own plants.

Information is like compost; it does no good unless you spread it around.
